

The Koala IU[®]PC is compatible with all major brands of fetal monitors. This tool is designed to help identify what fetal monitor is being used and to ensure the correct cables are ordered for an in-service or evaluation.

The most common cables that are used with the Koala are the **GE Medical (Corometrics) IPC-5014 cable**, the **Philips IPC-5080 cable** and the **Philips IPC-5012 cable**.

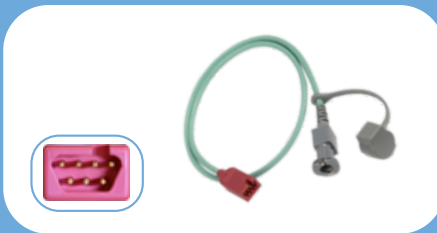

IPC-5014

Compatible with **GE Corometrics 250cx**

IPC-5080

Compatible with **Philips Avalon Monitors**

As a reminder when zeroing the transducer while using the **Phillips Avalon monitor** the catheter needs to be disconnected from the cable, not the cable from the adapter cable.

IPC-5012

Compatible with **All Other Philips Monitors**

KOALA CABLE TOOL

IPC-5016

Compatible with **Spacelabs Medical AMS 94000**

IPC-5090

Compatible with **EDAN Instruments**

The Koala Intrauterine Pressure Catheter is the only IUPC that has no electronics in the catheter.

The external transducer provides easy, true zeroing in utero.
